Hands-On-Activity No. 1.3

Writing First Program using C++ Language

Course Code: CPE007	**Program: Computer Engineering**
Course Title: Programming Logic and Design	**Date Performed: July 15, 2026**
Section: CPE11S2	**Date Submitted: July 16, 2026**
Name: Jose, Redge Jansen A. Jose	**Instructor: Sir NJ**

1. Objective(s)

This activity aims to develop first program using C++ Language

2. Intended Learning Outcomes

2.1 Code simple instructions using C++ Language

2.2 Debug errors from simple programs

2.3 Run executable programs

3. Materials and Equipment

Internet connection
Personal Computer

4. Procedure

Find all possible compilation errors and logic errors. Fix them

5. Output

1.
```
#include <iostream>
int main ()
{
   std::cout << "The value of five is: " << 5;
   return 0;
}
```

2.
```
#include <iostream>
int main ()
{
      std::cout << "The value of six is: " << 16-0-10;
   return 0;
}
```

3.
```
#include <iostream>
using namespace std;
int main ()
{
      cout << "The value of seven is: " << 80-87 << endl;
      cout << "The value of eight is: " << (8000-7992);
   return 0;
}
```

4.
```
#include <iostream>
using namespace std;
int main ()
{
      cout << "The value of nine is: " << 10-1 << endl;
      cout << "The value of ten is: " << 5*2;
  return 0;
}
```

5.
```
#include <iostream>
using namespace std;
int main ()
{
      cout << "The value of twenty-one is: " << 6+15 << endl;
      cout << "The value of twenty-two is: " << 21+1 << endl;
      cout << "The value of sixty-two is: " << 59+3 << endl;
      cout << "The value of seventy-four is:" << 30+44;
   return 0;
}
```

6.
```
#include <iostream>
using namespace std;

int main()
{
   int simpleVariable = 10;
   cout <<"The value of ten is:" << simpleVariable;
   return 0;
}
```

7.
```
#include <iostream>
using namespace std;
int main()
{
   int seconds = 60;
   int minutes = 60;
      cout<< "One hour is " << 60*60 << " seconds";
   return 0;
}
```

8.
```
#include <iostream>
using namespace std;
```

```
int main()
{
   int Part1 = 127;
   int Part2 = 0;
   int Part3 = 0;
   int Part4 = 1;
   cout << "Localhost IP is "<<  Part1 << "." << Part2 << "." << Part3 << "." << Part4;
}
```

9.
```
#include <iostream>
using namespace std;
int main()
{
int  January = 31;
int  February = 28;
int  March = 31;
int  April = 30;
int  May = 31;
int  June = 30;
int  July = 31;
int  August = 31;
int  September = 30;
int  October = 31;
int  November = 30;
int  December = 31;
int daysInFirstHalf =  January +  February +  March +  April +  May +  June;
int daysInSecondHalf =  July +  August +  September +  October +  November +  December;
cout << "Days in the first half of the current year:"<< daysInFirstHalf << endl;
cout << "Days in the second half of the current year:"<<daysInSecondHalf << endl;
cout << "Days in the current year:" <<daysInFirstHalf + daysInSecondHalf;
return 0;
}
```

10.
```
#include <iostream>
using namespace std;
int main()
{
   int Q1 = 90;
   int Q2 = 91;
   int Q3 = 92;
   int Q4 = 92;
int Daysinayear = Q1 + Q2 + Q3 + Q4;
cout << "Sum of all four quarters is " << Daysinayear;
return 0;
}
```

6. Additional Activity
None
7. Conclusion
Learned how to identify errors in the code and fix them, also learned basic coding in C++
8. Rubric
